

SIP Channel

Information About the Service

This is an IP based voice telephony service that is supplied over a fixed broadband internet service and customer owned hardware that can be used to make national and international calls. SIP Channel provides the customer with a SIP Trunk that utilises a Voice over IP (VoIP) connection to make and receive phone calls.

The monthly plan fees include one new geographic phone number, all calls to local/national/Australian mobile numbers, one SIP Trunk.

Bundling Arrangements

This service is not conditional on any bundling arrangements, however we do provide other telco services that can be included on one bill. It is recommended that it be used in conjunction with a dedicated Connected 360 broadband service.

Mandatory Components and Conditions

Compatible hardware and/or software is required to use the service. The service is compatible with a wide range of VoIP compatible PBX/phone systems. Hardware can be purchased from Connected 360 as an optional extra if required.

The internet service may be supplied by any service provider. Service requires a minimum bandwidth of 100kbps of uncongested upstream and downstream for optimal quality. Call quality may be affected by the internet connection, firewall, hardware, or other matters outside the control of Connected 360.

If the Service is unavailable due to any reason such as a power outage, it will prevent successful connection to the 000 emergency services. For this reason, Connected 360
